

operating the 600 shoulder CPM unit

Device Trouble Shooting

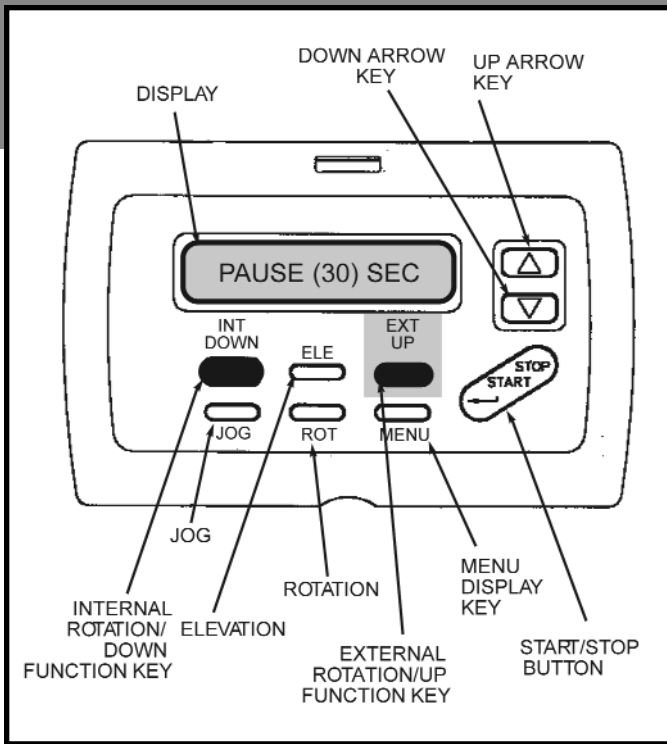

IF THE CPM DEVICE IS NOT WORKING, CHECK FOR THE FOLLOWING:

The device is plugged into the outlet.

The outlet has an electrical source.

If a light switch operates the outlet, make sure the switch is turned on.

The cable for the Patient Controller Switch is plugged into the top of the power box.

TURNING ON THE UNIT

Turn on the POWER SWITCH located on the power supply box. The controller LOCK OUT switch located next to the power switch should be placed in the SET position.

MEMORY FEATURES

Each time the 600 is powered-up, the range of motion and menu settings will be the same as when the unit was last run. The 600 will keep track of the number of hours the patient has used the device. Press the menu button until "TOTAL HOURS" appears on the display.

START/STOP BUTTON

The patient may stop and restart the CPM at any time by pressing the START/STOP button on the controller or the START/STOP button on the auxiliary switch. The unit will move in the opposite direction upon restarting.

ELEVATION is adjusted by pressing the "ELE" button. The elevation message will appear in the display window. To adjust the up or down limits depress the DOWN or UP function key and hold while simultaneously depressing the up or down arrow buttons. ROM limits are locked when elevation is released.

ROTATION is adjusted by pressing the "ROT" button. The rotation message will appear in the display window. To adjust the internal or external limits, depress the INT or EXT function key and hold while simultaneously depressing the up or down arrow buttons. ROM limits are locked when rotation is released.

OPTIONS

The 600 offers a menu of selected options which will allow custom treatment. These options include SPEED, PAUSE, WARM-UP, SYNCHRONOUS, and TOTAL HOURS. Each time the MENU button is pressed a different option appears in the display window. Adjustments can be made with each option.

SPEED ADJUSTMENTS

There are two SPEED options available (HI equals 2 degrees per second, while LOW equals 1 degree per second). Depress the MENU button until SPEED data appears. Adjustments can be made with each option.

CAUTION: ADJUST MOTION SETTINGS ONLY UNDER PHYSICIAN'S OR THERAPIST'S ORDERS.

getting back to motion!

Your doctor just chose the best for you. OrthoRehab is passionate about motion and we have the products and devices that, as part of your rehabilitation, will help your recovery take a big step forward.

As the leading accredited provider of Continuous Passive Motion (CPM),

OrthoRehab's people and products have consistently been among the top ranked rehabilitation companies with surgeons, therapists and patients. Now that your surgery is over, our CPM therapy will play a key role in your recovery.

With over a decade of continual research and development, our CPM devices set the industry standard for quality and technological capability. This dedication continues today and can be seen in our wide array of CPM devices and other orthopaedic products. Working with leading surgeons and physicians, we continue to provide products and services that smooth your road to recovery.

What is CPM?

CPM is a post-operative, therapeutic modality that passively (without patient effort), moves a joint through a prescribed range of motion, referred to as ROM.

Most of the time after orthopaedic surgery or other joint trauma, it is painful to move a joint actively (with patient effort), so most people will keep the joint still. The problem with this is that joints get stiff when they are not moved. CPM is beneficial because it keeps the joint moving effortlessly, in a slow, controlled pattern. This motion increases blood flow to the injured tissue.

CPM is safe and effective, and in the long-term it will help to maintain your ROM, decrease your pain, and keep you moving.

Service Beyond the Equipment

OrthoRehab has sales and service individuals nationwide, and a full staff of representatives that work with your doctor and insurance company every step of the way.

To arrange for home therapy, your doctor or office nurse calls an OrthoRehab representative. We discuss your upcoming surgery and make arrangements with you to deliver your CPM device and any other orthopaedic products your doctor has prescribed for you at home. We set the CPM device up, adjust it, and show you how it is used. For the duration of your home CPM use, we

are available to assist you whenever you have concerns. You can only benefit from CPM if you use it as prescribed, so we monitor your progress and communicate with your doctor or therapist if necessary. When your therapy is complete, just call us and we will pick up the CPM device. Our team approach makes the whole process easy for everyone.

Processing the Paperwork

Most medical insurance policies provide orthopaedic home therapy benefits. OrthoRehab is a "third-party biller" and, as a courtesy, we will take care of communicating with your insurance company to work on getting a pre-verification of insurance coverage and an authorization for a CPM device. While you are still responsible for the total amount due, most insurance companies will pay 80% of the cost, after your deductible is met. If you are not sure about your insurance coverage, contact your insurance claims payment office with questions concerning your policy.

In addition to a line of CPM devices for almost every major area of the body, OrthoRehab also carries a large variety of orthopaedic items including electrotherapy, cold therapy, bracing and compression therapy products. Our reimbursement specialists can help you with the paperwork on these items also.

SAFETY INSTRUCTIONS

- Keep hair, loose clothing, fingers and all parts of the body away from moving components of the device.
 - Do not expose the device to water or extreme temperatures.
 - Turn the power off before unplugging.
 - Unless using the device or recharging the battery, turn the device off and unplug from the power supply.
 - Do not use the device, power supply or controller if it appears damaged or if there are exposed wires.
 - Do not pour cleaning solution directly onto the device. This may allow fluids to damage the device.
-

If you have pain, discomfort or treatment questions, contact your physician.
